

**PLEASE ATTACH THIS FORM TO REQUEST FORM**

*These tests measure specific IgE levels in the blood and indicate sensitisation, but not necessarily an allergy to the allergen. Many sensitised patients may not develop clinical symptoms, while some who react to an allergen may not have detectable allergen-specific IgE in their blood. When requesting allergen-specific IgE testing, it is essential to consider the patient's history, as an allergy diagnosis cannot be based solely on laboratory results.*

**SPECIMEN:** 10 mL clotted in gold top container.

**NOTE:** Medicare will fund a maximum of four patient episodes in any 12-month period. This includes a maximum of four single allergens or four mixes per episode. If not ordered at the same time, additional patient episodes will require a new referral and specimen collection. Any tests requested beyond this limit will incur an out-of-pocket cost for the patient.

PLEASE ☒ TEST(S) REQUIRED

**TOTAL IgE**

☐ **Total IgE**

*Suggested to improve the interpretation of specific IgE results.*

**ADDITIONAL NOTES:**

**ADDITIONAL NOTES:**  
Allergen mixes are best used to refine the direction of individual allergen requests, which have better sensitivity and better specificity, prior to treatment.

In children, due to lack of sensitivity and specificity, and to prevent unnecessary food avoidance, testing for individual allergens is preferred over mixes.

When one drug allergen is ordered, such as Amoxycillin, Clinical Labs will test all four available penicillins individually as a standard.
